SKILLSET

- Python, HTML, CSS, JavaScript, Git

EXPERIENCE

Local Client & Independent Web Projects *-Web Developer, (08/2026 - ongoing) - (Remote)*

- Designed, developed, and deployed custom, responsive static websites for local businesses via Github Pages: labarberiatucson.com, bateypr.com, inabarberlounge.com
- Engineered fluid typography systems using CSS clamp() and media queries to resolve mobile UX constraints.
- Managed DNS records, CNAME routing, SSL/HTTPS configuration, and commercial font licensing compliance.

Back9 Parlor *-Full Stack Developer, (01/2026 - ongoing) - (Remote)*

- Developing two distinct web platforms - a custom-coded site (HTML, CSS, JS) and a 10Web/WordPress site – to provide the client with a performance-optimized custom build vs. a highly scalable, AI-integrated CMS
- Engineering a scheduling and resource management system using WooCommerce, ensuring real-time booking capabilities for high-end golf simulator bays
- Using Elementor within the 10Web environment to rapidly deploy and test service funnels for Leagues and Memberships, while simultaneously building a lightweight, hard-coded alternative to ensure maximum SEO and load speed.
- Presenting technical trade-offs between a custom codebase and a managed WordPress ecosystem to guide the company's digital strategy.

Flutter App *- Flutter Developer, (11/2025 - 12/2025) - (Tucson, AZ)*

- Used Flutter to develop a prototype for a novel mobile app in an apparently new application space. At present, I am unable to reveal the name of the app, per client's request
- Designed and implemented a cross-platform application using the MVC architecture to ensure a clean separation of concerns and scalable code.
- Used a robust SQL-based persistence layer to manage complex data relations, including user profiles and dynamic media uploads.

Hexagon Mining *- Quality Assurance, (05/2023 - 07/2024) - (Tucson, AZ)*

- Using the TestRail API, devised a Python script that leverages openpyxl to automate the retrieval and persistence of TestRail execution results into an Excel spreadsheet used to assess test runs requiring retest – saved testers 20 hours of manual effort per execution
- Conducted manual and automatic QA testing against an application that visualizes fatigue and distraction events using the analytics and reporting tool connecting HxGN MineProtect Operator Alertness System's (OAS) on-board camera with Hexagon's web interface

EDUCATION

University of Arizona *- Bachelor of Arts, (08/2015 - 02/2020) - (Tucson, AZ)*

Not Graduated/No degree attained

- CSC110 and CSC120 (Intro to Computer Programming I & II, in Python
- CSC210 (Software Development, in Java)
- CSC337 (Web Programming, with HTML, CSS, JavaScript)
